Software Engineer Program, 2027 Batch

Hiring Manager

JPMorgan Chase & Co.

Dear Hiring Manager,

Most people apply to JPMorgan Chase because of the name. I am applying because of the problem. Financial systems sit at the backbone of how the world works, and building the software that keeps them secure, fast, and trustworthy is one of the most technically demanding challenges in engineering today. That is exactly the kind of work I want to do. I am Netal Agarwal, a pre-final year B.Tech student in Information Technology at VIT Vellore (CGPA: 8.80), and I am writing to apply for the Software Engineer Program, 2027 Batch.

Over the past year, I have worked hard to make sure my skills go beyond the classroom. I built a **Digital Wallet for Shared Expenses**, a full-stack web application with real-time expense splitting, AJAX-driven updates, and MongoDB-backed transaction management. More recently, I developed a **Serverless FileFinder** on AWS, using Lambda, API Gateway, DynamoDB, and pre-signed S3 URLs, with least-privilege IAM roles and CloudWatch monitoring. Building something secure and scalable from scratch taught me a lot about what it means to write code that people can actually depend on.

Last summer, I interned at **DRDO (Defence Research and Development Organisation)**, where I worked on integrating AI into defence communication networks. It was my first experience working in an environment where getting things wrong is simply not an option. I came away with a much sharper understanding of secure system design, and a genuine appreciation for the rigour that mission-critical software demands. I believe that same standard of care is what JPMorgan Chase brings to financial technology, and it is something I want to be part of.

Outside of technical work, I have taken on responsibilities that have shaped how I collaborate and communicate. As **Outreach and Partnerships Head at Juvenile Care Club VIT** and a **Core Member of ACM Chapter VIT**, I have coordinated programmes and supported the planning of technical events for the student community. These experiences have taught me that good engineering is as much about people as it is about code.

What drives me is not just the desire to learn, but the urge to build and contribute. Every project I have worked on, every system I have designed, has been driven by one question: what can this actually do for someone? I am at a stage in my career where I have the foundation, the hunger, and the focus to take what I have built so far and apply it to problems that genuinely matter. JPMorgan Chase is where I want to do that.

Thank you sincerely for your time and consideration. I look forward to the possibility of speaking with you.

Warm regards,

Netal Agarwal
